

Bioinformatics for Biologists: A Series of Three Minicourses

Spring 2006
Whitehead Institute
9 Cambridge Center
Cambridge, MA

This series of three bioinformatics mini-courses will introduce you to a broad scope of bioinformatics tools, providing both theory & practical applications. The courses are self-contained & thus you may take any combination of the three courses. Approximately half of each two-hour session will be devoted to lecture-style instruction to provide you with the necessary bioinformatics skills. The second half of each session will focus on “hands-on” experience to exercise these skills.

These courses are appropriate for lab biologists or lab managers with a good understanding of molecular biology. Familiarity with web-based bioinformatics tools is a plus, but not a requirement.

Unix, Perl & BioPerl - February 27, March 1, 2; 1:30 - 3:30pm

Relational Databases for Biologists - March 27, 29, 30; 1:30 - 3:30pm

Analysis of Microarray Data - April 24, 26, 27; 1:30 - 3:30pm

For more details & to register for classes, please see our web site:
